SUMMARY

Backend engineer with production experience building fault-tolerant APIs, data pipelines, and full-stack systems. Shipped real products across internships and personal projects - system design, database modelling, third-party integrations, CI/CD, and cloud deployment. Comfortable owning features end-to-end in fast-moving teams, with a strong focus on testing, edge cases, and failure modes.

PROFESSIONAL EXPERIENCE

Riidl - Software Developer Intern *Feb 2026 – May 2026*

- Shipped 10+ REST API endpoints connecting Supabase storage, replacing ad-hoc file handling with a structured, secure, fault-tolerant workflow.
- Resolved a data retrieval reliability issue impacting live users through root-cause debugging, bringing the error rate to near zero.
- Cut file upload and retrieval latency by 35% by profiling and rewriting bottleneck backend services, directly improving response times for production users.

Thworks - Software Developer Intern *Jan 2025 – Jun 2025*

- Built a scraping pipeline collecting 500+ structured records into PostgreSQL - 12 months of historical data across 3 leagues - served via REST API to a Next.js frontend, replacing manual data entry.
- Delivered 4 cross-platform React Native apps from Figma to production, pixel-accurate on iOS and Android, on schedule within a 6-month engagement.
- Connected LinkedIn OAuth 2.0 to mobile APIs, enabling secure user authentication for production workflows.

PROJECTS

Crispr · *Python · Flask · Whisper · DistilBERT · React · DeepFilterNet* GitHub

- Built an audio post-processing pipeline that removes filler words from voice recordings using Whisper (stable-ts) for transcription, a fine-tuned DistilBERT classifier for filler detection, and pydub for surgical audio cuts.
- Connected DeepFilterNet for noise suppression post-processing, served via Flask REST API with a React frontend - engineered with validation, edge-case handling, and failure-tolerant pipeline stages.
- Fine-tuned DistilBERT on labelled speech transcripts to distinguish true filler words from context-dependent usage, improving classification accuracy over a rule-based baseline.

LoopLearn · *Python · Flask · React · PostgreSQL · Razorpay · GitHub Actions* GitHub | Live

- Architected the full backend: modelled 50+ engineering topics as a directed graph in PostgreSQL for prerequisite-based learning paths, with a Flask API serving structured daily content in text and audio formats.
- Built an automated content pipeline using Python scheduled jobs serving 100+ articles with zero manual intervention; deployed via GitHub Actions CI/CD across Vercel and Render simultaneously.
- Wired up Razorpay billing end-to-end - webhook handling, idempotent payment state management, and access-control gating - enabling a functioning paid tier without third-party auth platforms.

FormGen · *Python · JSON Schema · ReactJS · PyPI* GitHub | PyPI

- Published an open-source Python package to PyPI that parses JSON schemas and auto-generates fully typed ReactJS form components, supporting 8+ input types including nested objects, enums, and arrays.
- Built a modular validation engine (required, pattern, range) with dynamic error messaging, cutting frontend form development time by over 50% for consuming engineers.

Vibexx · *Python · Flask · OpenCV · Spotipy · Next.js · OAuth 2.0* GitHub | Live

- Built a real-time facial emotion detection pipeline using OpenCV classifying 6 expressions from live webcam input, mapping each to Spotify audio feature parameters (valence, energy, tempo) for dynamic playlist targeting.
- Wired up Spotify OAuth 2.0 and Spotipy across 5+ Flask REST endpoints managing session state and playlist logic; engineered with explicit failure handling for auth expiry and API rate limits.

EDUCATION

Somaiya Vidyavihar University, Mumbai *Graduated 2026*

B.Sc. in Information Technology · CGPA: 9.28 / 10.0

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C++, SQL

Backend: Node.js, Express.js, Flask, FastAPI, Django, REST API Design, OAuth 2.0, Webhook Handling

Frontend: React.js, Next.js, React Native

Databases: PostgreSQL, MySQL, MongoDB, Redis, Supabase

AI / ML: Whisper (stable-ts), DistilBERT (fine-tuning), audio ML pipelines

DSA: Arrays, Hashmaps, Linked Lists, Binary Search

Tools & Infra: Git, GitHub Actions (CI/CD), Docker (basics), AWS, Vercel, Render, Postman, Jira

Other: Data Pipelines, Web Scraping, Idempotent Job Design, Fault-tolerant Workflows
