SUMMARY

Software Developer experienced in building full-stack web and mobile applications using JavaScript, Python, and React. Worked on production systems involving REST APIs, authentication, and data pipelines during internships and personal projects.

EXPERIENCE

Software Developer Intern

Onsite/Remote

Riidl *Feb 2026 – Present*

- Built backend API routes and integrated Supabase for database operations and storage bucket management.
- Implemented file upload and retrieval workflows using Supabase storage buckets.
- Designed API endpoints to support secure file handling and data retrieval.

Software Developer Intern

Remote

Thworks *Jan 2025 – June 2025*

- Developed and shipped React Native applications from scratch using Figma UI designs, ensuring pixel-perfect implementation and responsive layouts.
- Designed and implemented backend services with Node.js and Flask, integrating APIs, authentication, and data workflows with mobile applications.
- Implemented LinkedIn OAuth authentication for secure user onboarding.
- Built a web scraping pipeline that collected and stored 500+ project records in PostgreSQL, with optimized queries for fast retrieval.
- Designed and deployed REST APIs to serve the scraped data and integrated them into a Next.js frontend.

PROJECTS

Vibexx | Mood-Based Personalized Music Recommendation System **- Link**

Tech Stack: *Python, Flask, OpenCV, imageio-ffmpeg, Spotipy, Next.js*

- Built a full-stack application that generates Spotify playlists based on real-time facial emotion detection using webcam.
- Integrated webcam-based emotion detection with the Spotify API to generate real-time, mood-aligned music playlists.
- Designed RESTful APIs using Flask to enable communication between the Next.js frontend and backend services.
- Analyzed Spotify audio features to improve playlist matching accuracy and consistency.
- Integrated secure OAuth authentication for personalized Spotify playlist generation.

FormGen | Schema-Driven React Form Generator ***- Link***

Tech Stack: *Python, JSON Schema, React, JSX*

- Developed a Python package to parse JSON schemas and generate fully functional, customizable React form components.
- Implemented support for multiple input types, validation rules, and dynamic select options for versatile form generation.
- Published the package on PyPI with clear documentation and usage examples, enabling easy adoption by developers.
- Designed modular code architecture to allow easy extension of field types, attributes, and validation logic

LoopLearn | Daily Engineering Learning Platform - **Link**

Tech Stack: *Python, Flask, React, Javascript, PostgreSQL, Razorpay, Render, Vercel, GitHub Actions*

- Built a full-stack learning platform delivering daily engineering concepts with real-world examples.
- Designed a graph-based topic system that expands concepts into related subtopics, enabling progressive learning paths.
- Developed an automated backend pipeline and REST APIs with Flask to fetch sources, compile content, and publish daily articles.
- Integrated Razorpay subscriptions and deployed services using Render and Vercel.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, SQL
Tools and Platforms: Git, Postman, AWS, Vercel, Jira
Libraries and Databases: Redux, Axios, Mongoose, Pandas, NumPy, PostgreSQL, MongoDB, MySQL, Redis, Supabase
Technologies and Frameworks: React.js, Node.js, Express.js, Flask, Django, Tailwind CSS, REST APIs, FastAPI, Selenium
Additional Skills: Debugging, API Integration, Deployment, Version Control Workflows, Web Scraping, Testing

EDUCATION

Somaiya Vidyavihar University — **Mumbai, India**

B.Sc. in Information Technology *2023–2026*

CGPA: 9.26 / 10

Royal Junior College — **Dombivli, India**

Commerce *2022–2023*

12th Grade: 76%
