SUMMARY

Results-driven Backend Software Developer with 1+ year of internship experience delivering production-ready REST APIs, full-stack applications, and streamlined data pipelines using Python, Node.js, Flask, and React. Proven ability to ship scalable, cloud-deployed systems independently and within cross-functional teams. Published open-source tooling on PyPI, built SaaS platforms with real paying users, and consistently utilised Agile practices. Seeking a software engineering role where strong fundamentals, self-motivation, and a track record of shipping real products will add immediate value.

PROFESSIONAL EXPERIENCE

RIIDL | Software Developer Intern February 2026 - Present

-Spearheaded 10+ REST API endpoints integrating Supabase storage, establishing secure file handling workflows that improved data retrieval reliability across the platform.

-Optimized backend services to cut file upload and retrieval latency by 35%+, improving system performance and user experience for production users.

-Collaborated with 3+ cross-functional team members to define requirements, perform code reviews, and ship production-grade backend features on schedule.

THWORKS | Software Developer Intern January 2025 - June 2025

-Constructed 4+ cross-platform React Native applications translating Figma designs into pixel-perfect, responsive UI across iOS and Android devices.

-Integrated Node.js and Flask backend services with LinkedIn OAuth 2.0 authentication and mobile data APIs to support high-traffic production workflows.

-Programmed a web scraping pipeline that stored 500+ project records in PostgreSQL, covering 12 months of historical data across 3 leagues, served via REST APIs to a Next.js frontend.

PROJECTS

Vibexx | Python, Flask, OpenCV, Spotipy, Next.js, OAuth 2.0 GitHub | Live Demo

-Architected a full-stack app detecting 6 facial emotions in real-time via OpenCV, generating personalised Spotify playlists using audio feature analysis and OAuth 2.0.

-Built 5+ secure REST API endpoints with Flask for frontend-backend communication, incorporating Spotify OAuth 2.0 and dynamic playlist curation logic.

FormGen | Python, JSON Schema, ReactJS, PyPI GitHub | Live Demo

-Released an open-source Python package on PyPI supporting 8+ input types, enabling developers to auto-generate ReactJS form components from JSON schemas.

-Executed a modular architecture with dynamic validation rules across 3+ validation types, reducing frontend form development time by over 50% for engineers.

LoopLearn | Python, Flask, React, PostgreSQL, Razorpay, GitHub Actions GitHub | Live Demo

-Launched a full-stack SaaS platform with 50+ engineering topics modelled as a graph in PostgreSQL, delivering daily concepts via text and audio for progressive learning paths.

-Established a scheduled content pipeline with Python and Flask serving 100+ articles; incorporated Razorpay subscriptions and CI/CD via GitHub Actions across 2 deployment platforms.

EDUCATION

Somaiya Vidyavihar University, Mumbai, India 2023 - 2026

B.Sc. in Information Technology | CGPA: 9.26 / 10.0

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL

Frameworks: React.js, React Native, Next.js, Node.js, Express.js, Flask, Django, FastAPI

Databases: PostgreSQL, MongoDB, MySQL, Redis, Supabase

Tools: Git, Postman, AWS, Vercel, Render, Jira, GitHub Actions (CI/CD)

Other: REST API Design, OAuth 2.0, Web Scraping, Data Pipelines, Agile/Scrum
